**Comprehension:**

Read the following passage and answer the questions that follow.

Life is as vast as space, but somehow we use our brain in a limited way. Our brain has been using thought as its instrument for millions of years. Thought created ‘i’. This creation has had tremendous effect on the brain as it is limited to ‘i’. Our whole life is lost in being a doctor, engineer or something else, and hence, we have pigeonholed ourselves into the roles of our professions. So our love is limited to our specific role. We have discarded the whole and limited ourselves to the parts. The profundity of life is lost.

Our mind is our thoughts and thoughts are nothing but what we talk to ourselves. Our mind is constantly chattering. It is a kind of inner self-talk, and it is constantly rehearsing the future, chewing its experiences. This is because you have no one to talk to, so you are talking to yourself. If you can peep into your mind, you will find that the mind is madness in motion. Perhaps someday, an instrument can look into the audio-video of our thoughts. Then it may become clear that it is some kind of madness operating. But we never look into ourselves, for if we look, we can see the madness of our minds.

The Katha Upanishad says, “We always look outward and never look within; thus we destroy ourselves. Only the courageous person looks within.” When you face your madness with courage, then your intelligence will search for sanity beyond the maddening mind.

When you look deeply within, you will realise you are not mind, but there is an inner space where the mind exists. The mind is like a cloud, and you are the sky in which the cloud is floating. Only in that transcendence, madness of the mind will drop.
